

How is audio keeping people, business facilities and cities safe & secure today?

IP intercom solutions and public address systems have emerged as a “must have” security solution as they allow people to hear, be heard, and be understood in any situation where required.

Here are some examples of the difference these solutions bring in different operational environments:

1. Communication in noisy conditions

On **ships and ferries**, audio through loudspeakers allow a ship's captain to communicate with everyone on board from the bridge. In a noisy engine room, instructions can be heard loud and clear as well.

2. Communication in rough, rugged environments

In **oil refineries**, rugged and durable intercom, public address and general alarm (PAGA), and two-way radio systems mean that instructions can always be heard.

3. Communication exactly where you need

In **manufacturing plants**, intercom and audio solutions ensure that plant operators can communicate to the entire plant or to selected zones. Signals by way of automated messages can be given if perimeter alarms are triggered.

4. Granting access & communicating with whom you need

In **hospitals**, intercom solutions can allow access and crystal-clear communication to restricted areas, cleanrooms, and isolation rooms. The intercom can also be used for operational paging to hospital staff

5. Communication in real-time with customers or visitors

In **retail stores**, instant voice communication is the key to delivering a quality customer experience. Intercom solutions and speakers can assist and entertain customers, help security guards to perform their jobs better, and enable communication between office staff and sales personnel.

6. Communication solutions for safety & security In correctional facilities

intercom solutions provide efficient audio and video assistance for visitors, cell communications, and integrate with **prison management** systems to enhance the guards' insight into situations and events.

7. Communicate solution for safety & security at educational facilities

In **schools and on university campuses**, intercom and public address systems can keep students safe via access control at doors, public address announcements throughout campus, and communication for daily operations such as class bells.

Whether it is a manufacturing plant, a school, or a healthcare facility, we need solutions that ensure the ability to hear, be heard, and be understood in every situation. These solutions are a critical part of everyday life and help ensure safety and security for all.

About Zenitel

Zenitel is a worldwide leading provider of intelligent critical communications solutions. Our focus is on the development of products and solutions that keep people safe by enabling everyone to hear, be heard and be understood - every time and everywhere. The history of Zenitel dates back to 1901 in Brussels, Belgium, where the corporate group headquarters has resided ever since.
