

PRO700

ENTRANCE CONTROL

when communication is critical

COMMUNICATION AND SECURITY IN BUILDINGS

The world has become a tougher place to live and work in. Criminals are always trying to infiltrate critical areas of business infrastructure, including potentially weak door entry areas. Over the last few years, as break-ins and vandalism have increased in frequency, so has the demand for Pro700 entrance control systems in order to improve access control of visitors.

In securing safe entry to the building and its facilities, the Pro700 communication and security system incorporates an entrance station on each door and gate – the first impression visitors get of the company or organization.

User-friendly for the business visitor, the vandal-proof station has a smart, one-call button for simple use. The system has flexible programming for setting up and changing the recipients of the call, and all entrance stations have their own relay for opening the door. The Pro700 entrance control systems can help employees and visitors feel secure in their working environment without undue restriction on freedom of movement.

The door stations are easily integrated with surveillance cameras and access card readers which makes the Pro700 an important component in the building's entrance control. An additional feature is the interface to fixed line or mobile telephones for communication out-of-office hours.

The Pro700 system includes stations for communication between offices, lift emergency communication, stations for rough environments like storage rooms and workshops and security features like scream alarm and silent alarm with a concealed push button.

With additional features like public address and background music, Pro700 is the complete communication and security solution for smaller offices, providing safety to personnel and reliable customer service.

ORDER NUMBER	DESCRIPTION	SHIP WEIGHT
AA711	Desk/Wall Master Station	0.3 kg
AA703	Industrial Master Station	0.8 kg
AB731	Tamper Resistant Substation	1.5 kg
AB731A	Door Station	0.9 kg

ENTRANCE CONTROL

FUNCTIONALITY & FEATURES

- Doorbell notification to programmable groups or individuals
- Vandal-proof design in stainless steel
- Built-in relay within the entrance station for door lock control
- Integration with surveillance cameras, card readers and conventional fixed line or mobile telephones
- Direct notification to designated station as required
- Designs for flush or surface mounting

BENEFITS & ADVANTAGES

- Hands-free, loud-speaking duplex conversation with instant access
- A variety of station types designed for most intercom services and environments
- Cost efficient system without central exchange
- Simple installation and extension with four-wire cable in bus or star configuration
- Integration with surveillance cameras, public telephones and closed radio network
- Entertainment program on separate channel selectable from all master stations
- Excellent sound quality
- Easily programmable and simplified access to features
