

PRO700

REFERENCE SHEET

when communication is critical

PARIS KINDERGARTENS & NURSERIES PARIS, FRANCE

Zenitel CSS France was chosen to provide intercom solutions to a number of new kindergartens and day nurseries belonging to the 'Ville de Paris'. The Pro700 system was chosen for its easy and quick installation; the requested functionalities are relatively simple to use. The systems installed provide clear and fast communication between the Manager's office and the different age groups as well as between the age groups themselves. They also allow the building to be safe and secure. On top of these prime requests, additional functionality was also required such as communication with the kitchen and other noisy areas. Further still, Zenitel supported the sites with the monitoring of their sleeping rooms, here the babies and children sleep under the cover of the Zenitel scream detection board.

GROCERY STORES NORWAY

The Hakon Group, which includes the grocery stores Rimi and ICA, has implemented Zenitel's Pro700 intercom system into approximately 250 of its stores around Oslo. Security is usually the main factor for a customer selecting Pro700 and this is particularly true at the grocery store. The Pro700 system increases security at the counter and yet decreases the workload when the number of cashiers is low. Any employee that feels threatened can call for backup with the single touch of a key and if an employee has to make a price request, verification or requires spare change, a call to the Supervisor is all that is required, eliminating any of the usual backwards and forwards activity. When deliveries are being made, a single 'doorbellcall' to staff areas is sufficient where caller verification questions may be asked. It is no longer necessary for staff to manually open any doors.

SUPERSPEED TRAIN CHINA

Zenitel has installed the Pro700 communication and security system on the fastest train in China, which travels at up to 430k/h. This train is one of the very first transrapid magnetic trains and runs between Shanghai International Airport and the City's financial district Lujiazui, a distance of 33 km covered in 7 minutes. The Pro700 system is set to respond to emergency calls, the customer requiring a maintenance free system, based on standard components, without the need for an exchange that was also easy to install. The transrapid train consists of 5 sections and each is equipped with AB731 stations by the doors, AA702 stations in the control rooms and one HD754 telephone interface to connect to the DECT telephone system. The complete system is supervised by a computer system connected to a central control room.

BUSINESS BAY, THE EXECUTIVE TOWERS DUBAI, UNITED ARAB EMIRATES

STENTOFON security audio intercom systems are used at Business Bay. This cluster of 11 residential towers containing more than 2,200 luxury apartments has all the comforts of home as well as the benefits of living in an upscale community. The Pro700 system is used for communication in Business Bay 11 Towers. The system comprises ten master stations and a total of 98 substations, each with a door bell function or one direct call button. The theme for the towers is the modern city of Dubai looking to the future of technology, business and living.
