HEALTHCARE: MODERN COMMUNICATION SOLUTIONS

- Manage multiple communication systems within a facility
- Maintain crystal-clear audio, even in noisy environments
- Increase operational efficiency with an intelligent and integrated audio platform

A hospital, a laboratory or a retirement home – all these facilities require clear communication to provide the best service to their residents and allow employees to work as efficiently as possible.

Because communication is such a critical component in providing healthcare in a safe and secure environment, we provide intelligent communication solutions that meet 3 key criteria:

**Intelligible Audio**, every single time. We specialize in hardware and software that allows you to hear, be heard and be understood, anytime, anywhere, every time.

Our solutions integrate seamlessly with other systems. **Interoperability** is key to improving efficiency and situational awareness.

Finally, an intelligent solution is easy to maintain, secure on the network, durable and intuitive.
We are a leading provider of different communication platforms for Public Address, (Emergency) Intercom and Fully Integrated Audio Systems with Radio, Telephony and anything voice related.

By using IP technology, our products are platform independent and can be used with basically any system that supports the open SIP protocol.

Depending on your needs, we offer anything from small-scale to fully integrated enterprise systems.

In addition, most of our VoIP devices support the SIP protocol and are certified against most of the well known IPBX Telephony brands.

Contact us today for more information at www.zenitel.com.
OUR SUGGESTIONS:

CRM-V IP FLUSH MASTER STATION
- Ideal for control-room applications
- Visual indications w/two LEDs (green/red) per DAK key
- All keys have backlight (adjustable)
- Easy labeling of keys

INTELLIGENT IP SPEAKERS
- Powered by PoE or DC
- 10W amplifier
- Tamper switch
- Individual volume control and monitoring

IP OR MASTER STATION
- Chemical resistant and anti-bacterial front surface
- Robust aluminium front plate to withstand maintenance and cleaning conditions
- Large high-contrast display with backlight
- 4 DAK keys for quick access to system menus and directory entries
- Hands-free call support using an external pedal

IPTV
- An IPTV Platform for virtually any environment
- Space-efficient
- Access to TV signals (digital terrestrial and satellite signals)
- Video on Demand (VoD)
- Android OS
- Billing
- Create own TV channels with MyTV
- Alarm-interface module

WHY VINGTOR-STENTOFON?
The Vingtor-Stentofon critical communication portfolio offers state-of-the-art quality audio software and hardware. Just press a button to call for immediate assistance, help and support. The voice on the end can be heard loud and clear, thus eliminating misunderstandings or misinterpretations. Even in very noisy environments, we offer crystal-clear audio – driven by our Turbine stations with 10 Watt amplifiers and active noise cancellation software included. Our quality products are built to last with backwards compatibility, reducing the cost of ownership.
