

## TECHNICAL BULLETIN

### IP LCM A module

To: All Zenitel offices and Vingtor-Stentofon partners.

10/12/2018

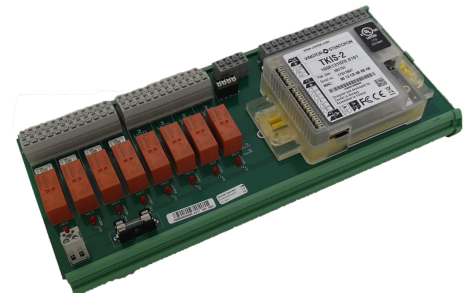

## IP Line Connection Module

We have released the IP line connection module and this device is available now.

The IP-LCM-A module is an expansion to the TKIS-2 that adds high power relays and robust control inputs to the kit, without extra wiring. DIN-rail mounting allows for a flexible I/O device that reduces the amount of wiring for I/O inside racks and other systems. The large robust connectors enable connections to external cabling without adding extra terminals and have been especially chosen to enable quick and easy connection of such systems. These devices will increase your engineering efficiency and give you more options for connecting your IP-based system to the world.

#### Product highlights:

- 8 relay outputs
- 8 control inputs
- Robust push-in connectors for cables up to 1.5 mm<sup>2</sup> / 16 AWG
- Device powered via the TKIS-2 kit using PoE or local power
- All other TKIS-2 features available
- In Alphascom the IP-LCM require a station license for operation.

#### Software:

Supported with VS-FT 4.10, Exigo 1.4, Alphasys 12.5.3.0 or higher.
