1 Introduction

This document is the detailed Interoperability Verification Test Plan and Report for **NEC IPBX family** and **Zenitel Stentofon IP STATION**

2 Product Overview

The station can register towards the **NEC IPBX family** as “Third-party SIP Device (Basic)” as SIP Endpoint.

The SIP Station supports SIP authentican and Outbound Proxy. It is possible to assign up to 2 Backup SIP servers for redundandsy purpose. The IP station has capability to initiate a call by one push button with predefined Directory number and receive calls by auto answer or manually by button.

The station supports G711uLAW and G711ALaw as well as G722 codec, and is also able to negotiate the codec in SDP and registration interval as well.

The Device supports configuration and software update through TFTP server by MAC specific configuration file. The device can also be configured through HTTP/HTTPS as it is a webserver running on the device.

The device can be monitored by SNMP server and receive traps from the station which can give error status about the hardware and application operational state.

The station also supports for VLAN (802.1q) and 802.1x authentication, and has an additional AUX port for connection to PC or other network device.

3 Executive Summary

Short Summary of the test effort – how testing went, or explain any positive or unusual events in testing . Identify any and all unexpected results.

4 Items Tested/Results Summary

The results of this summary are taken from the Test Cases section. The purpose of this is for Partner Program Team to review without the need of going into the full detail of the report. Only those test cases that did not pass are listed in this section. The full test case listing, including all passed test cases, can be found in Section 6, “Test Cases”.

Table 1 – Test Results Legend

Result	Description
Pass	The test case passed with no exceptions
Fail	The test case failed – details of the failure are noted in the Comments column
N/A	The test case is not applicable to the product under test. Justification must be provided in the Comments column.
N/S	Not supported. While the feature tested by this test case generally would be considered a standard feature for this product category, this specific product (or this specific release) does not support the feature.
N/T	Not tested. The feature is supported by the product under test, but external factors (lab configuration, e.g.) prevented execution of the test. Justification must be provided in the Comments column.
Blocked	Other test case failures prevented the execution of this test. Reference to the corresponding failed test case must be provided in the Comments column.

4.3 Items Tested

The Following features are testing in this test plan.

NEC IPBX family	RFC Reference	To Be Tested?
Call Hold and Resume	3261, 3264, 2327, 1889	Yes
Transfer Unattended	3261, 3264, 2327, 1889, 3515, 3420, 3265, 3892	Yes
Transfer Attended	3261, 3264, 2327, 1889, 3515, 3420, 3265, 3892, 3891	Yes
Call Forwarding All	3261, 3264, 2327, 1889	N/A
Call Forwarding No Answer	3261, 3264, 2327, 1889	N/A
Call Forwarding Busy	3261, 3264, 2327, 1889	N/A
Multiple Calls per Line	3261, 3264, 2327, 1889	N/A
Incoming Call Screening	3261, 3264, 2327, 1889, 3725	N/A
Outgoing Call Screening	3261, 3264, 2327, 1889, 3725	N/A
Calling and Connected Line ID	3261, 3264, 2327, 1889, RemotePartyID	Yes
Calling and Connected Name ID	3261, 3264, 2327, 1889, RemotePartyID	Yes
Message Waiting Indication	3261, 3264, 2327, 1889, 3842	N/A
Three-Way Conference Calling	3261, 3264, 2327, 1889	Yes
Call Forking	3261, 3264, 2327, 1889	N/A
Speed Dialing	3261, 3264, 2327, 1889	Yes
Multiple Lines per Phone	3261, 3264, 2327, 1889	N/A

4.4 Items Not Tested

Features that are specific to the internals of the 3rd party product or any features not listed will not be tested.

4.5 Assumptions

- Interoperability of 3rd party products – Testing will cover only features in 3rd party products that result in events to and/or from the IPBX or specified PSTN gateway.
- Call Processing – PSTN interface and NEC SIP call processing traffic for all testing (excluding manual sampling run during traffic) may be generated using simulators.

5 Test Environment

5.1 Administration, Testing and Debugging tools

None.

6 Test Cases

This section details the tests that will be performed during the testing period.

Unless otherwise noted in the individual test case, all tests shall be executed with a background load (provided by a load generation utility such as Camelot or SimClient) resulting sustained in IPBX CPU utilization of 65%.

Refer to Table 1 – Test Results Legend for the definitions of the annotations in the Pass/Fail column.

- NEC SIP Phone

6.1 Basic Call Scenarios

The intention of this section is to verify that basic calls can be properly handled between the SIP Phone under test and NEC SV8300. This test includes the validation of the different call stages from setup, alerting, connecting, and tear down, as well as different call scenarios between end points, IP server local or remote extensions and calls to and from PSTN, NEC SIP and NEC phones.

Test Case	Description	Expected Result	Pass/Fail	Comments
Station to Station Calls				
6.1.1	STENTOFON IP SUBSTATION to STENTOFON IP SUBSTATION , originator releases call	Two-way voice path, call released properly	P	
6.1.2	STENTOFON IP SUBSTATION to STENTOFON IP SUBSTATION , originator abandons call	Terminator stops ringing, originator released properly	P	

Test Case	Description	Expected Result	Pass/Fail	Comments
6.1.3	STENTOFON IP SUBSTATION to STENTOFON IP SUBSTATION , terminator releases	Two-way voice path, call released properly	P

DTMF Using G.711 (in band)				
6.1.29	STENTOFON IP SUBSTATION retrieves a voicemail, STENTOFON IP SUBSTATION releases call after sending DTMF tones		N/A	

Test Case	Description	Expected Result	Pass/Fail	Comments
6.1.30	STENTOFON IP SUBSTATION retrieves a voicemail, voicemail releases call after receiving DTMF tones		N/A	
DTMF Using RFC 2833 (out of band)				
6.1.31	STENTOFON IP SUBSTATION retrieves a voicemail, STENTOFON IP SUBSTATION releases call after sending DTMF tones	Voicemail retrieve successfully	P	
6.1.32	STENTOFON IP SUBSTATION retrieves a voicemail, voicemail releases call after receiving DTMF tones	Voicemail retrieve successfully	P	

6.2 NEC IPBX Feature Support

The goal of this section is to verify protocol interactions between the device under test and the NEC IPBX standards implementation. Focus is on feature call functionality, call control and other call information support interworking capabilities of the endpoint under test and the NEC IPBX version under test.

6.3 System Control and Verification

These tests are executed to determine the impact on calls, the Communications Manager and the 3rd party application when combinations of the aforementioned fail by power failure or network connectivity problems. Testing robustness of the application through hardware and software fault insertion i.e. failover/failback.

6.4 Negative Tests

These tests are executed to determine the impact on calls, the IPBX and the 3rd party application when combinations of the aforementioned fail by power failure or network connectivity problems. Testing robustness of the application through hardware and software fault insertion i.e. failover/failback.

6.5 Informational Tests

These tests are executed to verify specific information about the third-party product to NEC. This is in relation to the IVT Questionnaire supplied by the vendor. *Test cases in this section will be selected or modified to reflect attributes of the device under test. Standard examples are:*

Test Case	Description	Expected Result	Pass/Fail	Comments

6.5.12	Last Call Return		N/A	

7 Annotations:

- If DTMF are sent from STENTOFON Station to 3C Softswitch, this must be done using RFC2833.
- Call transfer (from IP Master Desktop) is only possible using “BLIND TRANSFER” feature. ATTENDED TRANSFER is not supported from IP Master Desktop.
- Registration towards NEC 3C platform is only possible if User Agent is defined in 3C configuration. STENTOFON IP Station (including Turbine) UA is fixed and value is “Zenitel IPSTATION” (case sensitive).
- TURBINE station has no VLAN configuration menu. In some customer network scenarios this could be a limitation. IP Master Station and IP Substation web configuration has VLAN menu.

8 Test result:

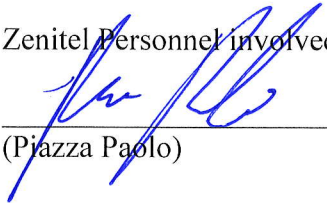

Performed tests results were generally positive.

No issues found.

Compatibility and interoperability between NEC Platforms/IP Phones and STENTOFON IP Station/Substation is certified.
