Transcoder Server 2000

Transcoder Server 2000 for HLS

Description

The Transcoder Server 2000 is used as a software transcoding solution with hardware acceleration. It is used for transcoding from MPEG-2 to H.264 or vice versa, changing picture resolution, frame rate, etc. The output can be sent to the network as multicast (UDP) or unicast (HTTP progressive) streams. The Transcoder Server is based on Intel i7 quad-core with 8GB memory, 240GB SSD and Win10 Pro OS for installation in standard 19" racks. Features such as quick/easy installation, lockable front door, washable dust-filter, and 1.2 mm thick material make this device an optimal solution for rack installations.

Specifications

PHYSICAL & POWER

Mounting	Rack Mountable, 4HU
Weight	22 Kg
Dimension (W x H x D)	430 x 176 x 445 mm
Power supply	90-264 VAC, 50-60 Hz
Max. power consumption	500W
IP rating	IP20
