DVB to IP Gateway 8X v2

DVB to IP Gateway 8X v2 w/ 8x DVB-S/S2/T/T2/C/C2 inputs + 8x CI slots

Description

The DVB to IP Gateway 8X v2 is a universal solution for receiving, decoding, and multicast or unicast streaming of satellite, terrestrial, and cable TV channels. The key advantages of the DVB to IP Gateway are its high density and compactness - the 1U rack-mount server can receive and decode 8 transponders/multiplexers. All 8 DVB inputs and 8 Common Interface (CI) slots are located at the rear panel of the device. It is used together with IPTV Server 8000 if more than 8 DVB tuners are required.

Specifications

PHYSICAL & POWER
