 Public Address Commercial Audio

Description

The RRM02 Remote Radio Microphone Receiver provides a method of implementation of RPA (Roving Public Address) functions to defined loudspeaker zones.

This unit is a convenient and compact method of providing a radio microphone receiver when a SAP02 Station Announcement Point is not required. The RRM02 is designed to work with the whole range of ASL Voice Alarm and Public Address systems, while the provision of the closing contact select output from the RRM02 also enables it to be connected to PA (Public Address) systems other than those provided by ASL.
