🔊 Public Address   Control Room Solutions

Description

The iVENCS Core is a highly scalable and user-friendly integrated management platform that offers comprehensive control, monitoring, and incident analysis for all transport and site safety, security, and communication subsystems. It serves as a central hub that seamlessly integrates subsystems across a single site, multiple sites, or along a railway line.

The iVENCS Control System core effortlessly integrates any required mix of subsystems into a single, user-friendly system. Each subsystem is equipped with its own dedicated controls, and all of the integrated subsystems can be presented on either a traditional 2D GUI or a powerful true 3D model of the installation.

Additionally, iVENCS can be integrated with Train and Signaling control systems, and Remote Condition Monitoring or Performance Reporting can be included if needed. Whether managing small site management or large sites, iVENCS can be customized to fit your requirements and provide a comprehensive solution.
