iVENCS Help Points Module

- ✓ FLEXIBLE CONTROL AND MONITORING OPTIONS
- ✓ SUPPORTS DIFFERENT PRIORITIES
- ✓ ON SCREEN SIDE BARS
- ✓ INDUSTRY STANDARD VoIP SIP
- ✓ COMPATIBLE WITH IVENCS CORE

Control Room Solutions

## Description

The iVENCS Help Point module provides integrated presentation and response controls for Help Points across a site, multiple sites, buildings, railway lines, railway stations, and on trains.

With iVENCS' intuitive 3D user interface and dedicated on-screen sidebar, users have quick and easy access to all the tools required to manage incoming calls from multiple locations, and with different call priorities. The Help point system can integrate with third party systems using proprietary interfaces, and can also integrate with industry standard SIP VoIP based Help Points and Emergency Call Points. iVENCS can present multiple manufacturer's Help Point systems as if they were one.
