EDVC

Exigo Digital Volume and Program Controller

DESCRIPTION

The Exigo Digital Volume and Program Controller (EDVC) allows the operator to control both the volume and audio program in a zone, and is fully compatible with the Exigo system. The EDVC allows the operator to change the audio program used for background music according to a preset list of different programs, as well as to adjust the volume in a preset range.

Volume override, where the audio level in the zone is returned to its original state, can be set by priority range, activity type or various combinations of these. Volume override will also be enabled if the device is disconnected or reported as faulty.

SPECIFICATIONS
