CYBER SECURITY IN THE MARITIME AND OFFSHORE SECTOR

Human factor

With the majority of attacks being targeted at people rather than IT infrastructure, the 'human factor' is widely considered to be the biggest risk in cyber security at sea.

- Keep **unauthorised software** away from ship system.
- Personal laptops, tablets, USB memory sticks or phones must **not be connected** to onboard operational systems.
- Never insert an **unknown USB** stick in your computer.

- Never open **e-mail** attachments you didn't ask for.
- Know what to do with **suspicious** e-mails.

- Keep **usernames** and **passwords** to yourself.
- Choose **complex passwords** with number5, \$ymbol!s and CAPital letters.
- Always **lock** your workstation.
- Know where to get **IT** and **OT** assistance.

Think before you share information on social media or personal e-mail about your company, job, ship or the crew.
